3-(Amino- or aminoalkyl)pyridinone derivatives and their
use for the treatment of HIV related diseases

The present invention is concerned with 3-(amino- or aminoalkyl)
pyridinone derivatives which inhibit the reverse transcriptase of the Human
Immunodeficiency Virus (HIV).

It relates moreover to the use of such compounds for treating HIV-
5 related diseases.

Furthermore it relates to a process for the preparation of these
compounds.

It is known that some pyrimidinone and pyridinone derivatives
inhibit HIV reverse transcriptase.

10 In particular, derivatives from 1-[(2-hydroxyethoxy)methyl]-6-
(phenylthio)thymine (HEPT) are well known for their HIV1 reverse
transcriptase inhibitory properties.

European Patent Application EP-0 462 800 (Merck and Company
Inc.) discloses pyridinones being substituted on position 3 with an aryl or
15 heterocyclic group, linked to the pyridinone ring through a chain.

Unfortunately, strains resistant to these compounds appeared .
Thus, their use in therapeutical treatments is questionable.

4-aryl-thio-pyridinones have been more recently disclosed by
DOLLE et al. (1995, J. Med. Chem., 38, 4679-4686), and in the
20 corresponding PCT Patent Application WO 97/05 113.

However, their activities are still moderate and their use in human
therapy also could lead to the emergence of resistant strains.

The most active thio pyridinones disclosed therein have a 50%
inhibitory concentration of virus multiplication (IC_{50}) for nevirapine resistant
25 strains of about 260 nM.

The inventors have found a new pyridinone derivative family which
show better HIV inhibitory properties.

They have moreover found a new process for obtaining these
compounds.

The present invention relates to compounds having the following general formula I.

5

FORMULA (I)

wherein

10

- Q represents $-NR_1R_2$ or $-R_0NR_1R_2$ wherein:

* R_0 represents C_{1-6} alkanediyl;

* R_1 and R_2 each independently represent C_{1-6} alkyl or C_{3-6} alkenyl;

15 said C_{1-6} alkyl and C_{3-6} alkenyl may be substituted with one, two or three substituents selected from hydroxy, C_{1-4} alkoxy, C_{1-4} alkylthio, aryloxy, arylthio, amino, mono- or di(C_{1-4} alkyl)amino and aryl; or

* R_1 and R_2 taken together may form a bivalent radical $-R_1-R_2-$ wherein $-R_1-R_2-$ represents $-(CH_2)_2-O-(CH_2)_2-$, $-(CH_2)_2-NR_7-(CH_2)_2-$,

20 $-(CH_2)_2-CH(NHR_7)-(CH_2)_2-$ or $-(CH_2)_n-$ wherein R_7 represents hydrogen or C_{1-4} alkyl and n represents 2, 3, 4, 5 or 6;

- R_3 represents aryl or a monocyclic or bicyclic heterocycle selected from pyridinyl, pyrimidinyl, thiazolinyl, furanyl, thienyl, imidazolyl, benzoxazolyl, benzothiazolyl, benzimidazolyl; said monocyclic or bicyclic
25 heterocycle may optionally be substituted with one, two or three substituents each independently selected from hydroxy, C_{1-4} alkyl, C_{1-4} alkoxy, halo, trifluoromethyl, dimethylenoxy or phenyl,

- R_4 and R_5 each independently represent hydrogen, C_{1-6} alkyl, C_{3-6} alkenyl, C_{1-4} alkoxy, C_{1-4} alkyloxy, C_{1-4} alkyl, amino, mono- or di(C_{1-4} alkyl)
30 amino, formyl, C_{1-4} alkylcarbonyl, carboxyl, C_{1-4} alkyloxycarbonyl, or C_{1-4} alkyl-

aminocarbonyl; wherein C₁₋₆alkyl and C₃₋₆alkenyl may be substituted with one, two or three substituents selected from hydroxy, C₁₋₄alkyloxy, C₁₋₄alkylthio, aryloxy, arylthio, amino, mono- or di(C₁₋₄alkyl)amino and aryl; or

- R₄ and R₅ taken together form a bivalent radical of formula -R₄-R₅- wherein -R₄.R₅- represents -CH=CH-CH=CH- or -(CH₂)_t-, wherein t represents 3 or 4;

- R₆ represents hydrogen, hydroxy, C₁₋₄alkyloxy, C₁₋₆alkyl, C₃₋₆alkenyl, aryl, C₁₋₄alkyl, amino, mono- or di(C₁₋₄alkyl)amino or alkylaryl;

- Y represents O or S;

- X represents a radical of formula:

wherein p represents 1, 2, 3, 4 or 5;

q represents 0, 1, 2, 3, 4 or 5;

r represents 0, 1, 2 or 3;

- Z represents NR₈, C(=O), CHOH, CHNR₈R₉; CF₂, O, S or CH=CH; wherein R₈ and R₉ each independently represent hydrogen or C₁₋₄alkyl;

or

N-oxides, stereochemically isomeric forms or a pharmaceutically acceptable addition salts thereof.

As used in the foregoing definitions and hereinafter halo defines fluoro, chloro, bromo and iodo; C₁₋₄-alkyl defines straight and branched chain saturated hydrocarbon radicals having from 1 to 4 carbon atoms such as methyl, ethyl, propyl, butyl and the like; C₁₋₆alkyl is meant to include C₁₋₄alkyl and the higher homologues thereof containing 5 to 6 carbon atoms such as, for example, pentyl, hexyl or the like; C₃₋₆alkenyl defines straight and branched chain hydrocarbon radicals containing one double bond and having from 3 to 6 carbon atoms, such as 2-propenyl, 3-butenyl, 2-butenyl, 2-pentenyl, 3-pentenyl, 3-methyl-2-butenyl and the like; and the carbon atom

of said C₃₋₆alkenyl being connected to a nitrogen atom preferably is saturated; C₁₋₆alkanediyl defines bivalent straight and branched chain saturated hydrocarbon radicals having from 1 to 6 carbon atoms, such as, methylene, 1,2-ethanediyl, 1,3-propanediyl, 1,4-butanediyl, 1,5-pentanediyl, 5 1,6-hexanediyl and the like. The term «C(=O)» refers to a carbonyl group. Aryl is phenyl or phenyl substituted with one, two or three substituents selected from C₁₋₄alkyl, C₁₋₄alkyloxy, halo and trifluoromethyl,

Preferred compounds according to the present invention are those in which X represents -CH₂- or C (= O) and R₃ represents a phenyl group, 10 substituted with two methyl groups, and the most preferred of them are those wherein R₃ represents a phenyl group substituted, in each meta position, with two methyl groups.

Preferably, in the compounds according to the present invention, R₁ and R₂ represent each a methyl group, R₄ represents an ethyl group, R₅ 15 represents a methyl group and/or R₆ represents a hydrogen atom.

The most preferred compound of this invention is the 3-dimethylamino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one.

The compounds in which X is -CH₂-, R₃ represents a phenyl group optionally substituted, Y represents O and R₆ represents a hydrogen atom 20 can be obtained by the general process represented on figure 1.

This first process comprises the following steps:

- a) reacting a pyridine (2), substituted in position 2 with an alkoxy group and in position 3 with an amidoalkyl group, with a C₁-C₆ alkyl lithium, resulting in a lithiated derivate (3) of the said pyridine.
- 25 b) transforming the lithiated derivate (3) into an organocopper reagent by reacting it with a complex formed by Cu I and dimethyl sulphide.

c) obtaining the pyridinone (4) by reacting the organocopper reagent with optionally substituted benzyl halide.

d) hydrolysing the protected pyridinone (4) and obtaining the deprotected pyridinone (5).

5 e) substituting the 3-amine group of the pyridinone (5) and obtaining the pyridinone (6).

This first process is summarized in the reaction Scheme 1 hereinafter:

SCHEME I

In this process R_{10} and R_{11} represent independently C_1 - C_6 alkyl. In a preferred embodiment, R_{10} is a methyl group and R_{11} is a tert-butyl group.

The C_1 - C_6 alkyllithium, reacted with the pyridine(2) can be a n-butyllithium.

5 The optionally substituted benzyl halide used in the step c) is preferably benzyl bromide.

The hydrolysis of the protected pyridinone(4), resulting in its deprotection, is advantageously obtained by adding hydrochloric acid to the pyridinone(4) and refluxing the mixture.

10 In a preferred embodiment, the amino group in position 3 of the pyridinone ring, deprotected during the step (d) is substituted by alkylation, by the Eschweiler-Clarke reaction.

Compounds wherein X represents $-(CH_2)_q-Z-(CH_2)_r-$, Y represents O, R_3 is an optionally substituted phenyl group and R_6 is an hydrogen atom
15 can be obtained by a similar process.

Compounds wherein X represents C (= O), or $-CH_2-$, Y represents O, R_3 is an optionally substituted phenyl group and R_6 is an hydrogen atom can be obtained by a second process.

20 In this second process, the lithiated derivative (3) is reacted with an optionally substituted benzaldehyde, resulting in the intermediates of formula (7).

The intermediate (7) is oxidized to intermediate (8).

The intermediate (8) is thereafter deprotected by hydrolysis, as in the first process, resulting in the pyridinone (9) of general formula I.

25 This second process is summarized in the reaction scheme II hereinafter.

Reaction scheme II

Preferably the oxidation of the intermediate (7) is performed in the presence of manganese dioxide.

The intermediate (7) can also be transformed into corresponding ester (10) wherein R_{12} represents a C_1 - C_4 alkyl group whose hydrogenolysis provides pyridinone (4) in better yields. Preferably, the ester (10) wherein R_{12} is CH_3 is prepared by treatment of intermediate (7) with acetic anhydride. Subsequently hydrogenolysis is performed under hydrogen atmosphere and in the presence of a catalyst, especially 30% paladized charcoal. This process is summarized in the reaction scheme III

10

Reaction scheme III

Other compounds of general formula I, and wherein X is $(CH_2)_p$ or $(CH_2)_q-Z-(CH_2)_r$ or $C(=O)$, and R_3 is other than phenyl and R_6 is other than hydrogen can be obtained by these processes, appropriately adapted by the man skilled in the art.

25

The compounds according to the present invention, in which X is S can be obtained by the process described in the article of DOLLE et al. (1995, previously cited) or in the corresponding patent application WO 97/05 113, the contents of which are included in the present application.

The compounds can also be obtained by other processes known by the man skilled in the art.

The present invention relates moreover to the intermediates of the processes hereabove disclosed. In particular it relates to the lithiated
5 derivative of formula (3).

The compounds of the present invention are useful in the inhibition of HIV reverse transcriptase, and in particular HIV-1 reverse transcriptase and the prevention or treatment of infection by the human immuno deficiency virus (HIV) and of HIV-related diseases , such as AIDS.

10 For these purposes, the compounds of the present invention may be administered orally, parenterally (including sub-cutaneous injections, intravenous, intramuscular, intrasternal injection or infusion tectoniques), by inhalation spray, or rectally, in dosage unit formulations containing pharmaceutically acceptable carriers, adjuvants and vehicles.

15 Thus, another object of the present invention is a method, and a pharmaceutical composition for treating HIV related diseases, HIV infection, and in particular AIDS.

The invention relates also to these compounds for use as medecine and to their use for the manufacture of a medecine for the
20 treatment of HIV related diseases, HIV infection, and in particular AIDS.

These pharmaceutical compositions may be in the form of orally-administrable suspensions or tablets, nasal sprays, sterile injectable preparations, or suppositories.

The present invention is illustrated without being limited by the
25 following examples.

EXAMPLES:**EXAMPLE 1****Preparation of 3-dimethylamino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one.****1) 5-Ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine.**

This compound has been prepared as indicated by DOLLE et al. (1997, Tetrahedron, vol.53, n°37, 12.505-12.524). The content of this article is hereby incorporated by reference.

3,68g of 3-Amino-5-ethyl-2-methoxy-6-methylpyridine (22,14 mmol), obtained as indicated by HOFFMAN et al. (1993, J. Med. Chem., 36, 953-966), was dissolved in a mixture of dichloromethane (260 ml) and triethylamine (3.39 ml). The mixture was cooled at 0°C and 3.00 ml of trimethylacetyl chloride was added dropwise. The solution was stirred at 0°C for 15 min. and then washed with 100 ml water. The aqueous layer was extracted with 3 x 200 ml dichloromethane. The combined organic layers were dried over magnesium sulfate and concentrated under reduced pressure. The residue was purified by column chromatography using dichloromethane as eluant to provide the 5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine (5.31g; 96%). Elemental analysis calculated for C₁₄H₂₂N₂O₂; C, 67.17. H, 8.86; N, 11.19; O, 12.78; found: C, 67.11; H, 8.56; N, 10.91; O, 12.67.

2)4-(3,5-Dimethylbenzyl)-5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine .

i) By lithiation of 5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine:

5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine and 3,5-dimethylbenzyl bromide were dried in the presence of phosphorus pentoxide under vacuum at room temperature during 24 hours. Copper iodide (CuI) was dried in the presence of phosphorus pentoxide under vacuum at 50°C for 24 hours. 5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine (1.06g) and freshly distilled tetramethylethylenediamine (TMEDA) (2.24 mL) were dissolved in dry tetrahydrofuran (THF) (26 mL) and the mixture was cooled at -78°C under a nitrogen atmosphere. n-Butyllithium (1.6 M in hexane, 9.26 mL) was added dropwise. The mixture was stirred for 1 hour at 0°C.

CuI :dimethyl sulfide complex, prepared by adding dimethylsulfide (14 mL) to a suspension of copper iodide (2.82g) in dry THF (52 mL) at -78°C under N₂ atmosphere, was then added dropwise to the mixture at -78°C. The mixture was stirred at 0°C for 30 min and cooled again at -78°C to allow the addition of 3,5-dimethylbenzyl bromide (3.81g) dissolved in THF (4 mL). The resulting mixture was stirred at 0°C for 3 hours and at room temperature for 12 hours. 16 mL of water and 20 mL of 28% aqueous ammonium hydroxide were added. The aqueous layer was extracted with 3 x 80 mL of ether. The combined organic layers were washed with 40 mL of brine, dried over magnesium sulfate and concentrated under reduced pressure. The residue was purified by column chromatography using cyclohexane-ethyl acetate (1:0 to 8:2) as eluant giving 4-(3,5-dimethylbenzyl)-5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine (577 mg, 37%) mp 138-139°C.

ii) By hydrogenolysis of \pm (5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridin-4-yl)-(3,5-dimethylphenyl)-methyl acetate.

**(+, -) (5-Ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridin-4-yl)-
(3,5-dimethylphenyl)-methylacetate.**

8.34g of (+, -)-(3,5-dimethylphenyl)-(5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridin-4-yl)-methanol, prepared as described below, was dissolved in pyridine (200 mL) and added to acetic anhydride (10.24 mL), and the solution was stirred for 1.5 h at room temperature and for 60 h at 60°C. An additional 10.24 mL of acetic anhydride (108.51 mmol) was added and heating was continued at 60°C for 24 h. The pyridine was evaporated under reduced pressure and the residue was taken up in 500 mL of ethyl acetate. The organic layer was washed with 170 mL of an aqueous saturated sodium bicarbonate solution, 170 mL of water and 170 mL of brine, dried over magnesium sulfate and the solvent was evaporated. The residue was purified by column chromatography using dichloromethane-ethanol (1:0 to 95:5) to give the titled compound (8.78g, 95%) mp 70-71°C.

A mixture of this compound (850 mg) and Pd-C (30%, 850mg) in acetic acid-water-dioxane (42.5 mL, 2:1:2, v/v/v) was stirred at room temperature for 24 hours under 10 atm of hydrogen. The catalyst was removed by filtration and washed with ethanol. The solvent of the combined filtrates was evaporated under reduced pressure giving 4-(3,5-dimethylbenzyl)-5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine (726 mg, 99%) which was identical to the compound as prepared in example 1.2.i).

3) 3-Amino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one.

3M aqueous hydrochloric acid (150 mL) was added to a suspension of 4-(3,5-dimethylbenzyl)-5-ethyl-2-methoxy-6-methyl-3-pivaloylaminopyridine (2.36 g) in water (300 mL). The mixture was refluxed

for 3.5 h and then stirred at room temperature for 12 h. The solution was basified by adding concentrated ammonium hydroxide and was extracted with 3 x 800 mL ethyl acetate. The combined organic layers were washed with 110 mL brine, dried over magnesium sulfate and concentrated under reduced pressure giving 3-amino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one . (1.79g, 100%). mp 204-205°C.

4) 3-Dimethylamino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2-(1H)-one .

10

To a stirred solution of 3-amino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one (200 mg) and 37% of aqueous formaldehyde (0.60 mL) in 5 mL of acetonitrile was added 139 mg of sodium cyanoborohydride. Glacial acetic acid (0.07 mL) was added dropwise and the reaction mixture was stirred at room temperature for 2 hours. An additional 0.07 mL of glacial acetic acid was added, and stirring was continued for 30 minutes. The solvent was evaporated and 15 mL ether were added to the resulting residue. The organic layer was washed with 3 x 30 mL 1N aqueous potassium hydroxide and 3 mL brine, dried over magnesium sulfate and concentrated under reduced pressure to give 3-dimethylamino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one (200 mg, 91%) mp 229-230°C.

EXAMPLE 2: 1) Biological activity of the compound according to example 1.

25

1. Material and Methods

The antiviral activity, the expression and purification of the recombinant HIV-RT enzyme, the reverse transcriptase activities and the inhibition of RT were evaluated as described in WO 97/05 113.

The retrovirucidal effect and the reverse transcription were measured as described hereinafter.

1.1. Retrovirucidal effect.

5

HIV-1 viral suspensions were obtained by coculture of MT4 cells and H9 cells chronically infected by HIV-I_{Lai} isolate. 200µl of a cell supernatant containing viral particles (HIV-I_{Lai}: 100 TCID₅₀) were incubated at room temperature with various concentrations of different inhibitors. After
10 3 hours, virions were washed through 0.02µm anopore membrane in 1.5 mL Vectaspin tube (Whatman) for 10 minutes at 5 000 g . Each of the three subsequent washes was performed in the same conditions after the viral concentrate was refilled with 500 µL of RPMI medium. Then, the viral concentrate was readjusted to the initial volume with RPMI plus 10% foetal
15 calf serum (FCS). The residual infectivity was assayed on P4 cells as described by CHARNEAU et al.. (1994, J. Mol. Biol., 241, 651-662). Briefly, P4 cells were plated using 100 µL of DMEM medium plus 10% FCS in 96 plate multi-wells at 20×10^5 cells per mL. After overnight incubation at 37°C, the supernatant was discarded and the viral preparation (200 µL) was
20 added. One day later the wells were washed three times in PBS. Each well was refilled with 200 µL of a reaction buffer containing 50 mM Tris-HCl pH 8.5, 100 mM 2-mercaptoethanol, 0.05% Triton X-100 and 5 mM 4-methylumbelliferyl β-D-galactopyranoside (MUG). After 3 hours at 37°C, the level of the reaction was measured in a fluorescence microplate reader.

25

1.2) Reverse transcription.

The plasmid pAV4 containing the 50-997 HIV-1 nucleotide fragment (MAL strain) in pSP64, under the control of the bacteriophage T7 promoter was a kind gift from Dr. J.L. DARLIX (INSERM-Lyon, France). E. coli HB 101 recA⁻ was used for plasmid amplification. After digestion of this clone with PstI and in vitro transcription using T7 RNA polymerase, a HIV-1 genomic RNA fragment starting at position +50 of the MAL sequence was obtained. In vitro transcription using T7 RNA polymerase as performed as follows. Three µg of linearized plasmid DNA were transcribed in 100 µL of 40 mM Tris-HCl pH 8.0, 8 mM MgCl₂, 10 mM spermidine, 25 mM NaCl, 10 mM dithiothreitol, 0.5 mM of each ribonucleoside triphosphate, with 100 units of T7 RNA polymerase and in the presence of 20 units of human placenta ribonuclease inhibitor, for 2 hours at 37°C. After treatment with 12 units of Rnase-free Dnase I (for 10 minutes at 37°C), the RNA transcripts were extracted with 1 volume of phenol/chloroform/isoamyl alcohol (24:24:1) and with chloroform and precipitated in 2.5 volumes of ethanol and 0.3 M ammonium acetate (pH 5.5).

Reverse transcription was performed in a total volume of 50 µL containing 50 mM Tris-HCl pH 8.0, 6 mM MgCl₂, 2 mM dithiothreitol, 12 mM NaCl, 150 nM HIV-1 RNA, and either 200 nM of a synthetic oligodeoxynucleotide primer (18-mer ODN) complementary to the PBS of HIV-1 RNA, or 200 nM tRNA^{Lys3}. When the 18-mer ODN was used as primer, incubation was carried out at 37°C with the template and 300 nM RT. After 30 minutes, 10 µCi [α-³²P]dGTP (3000 Ci/mmol) and 0.1 mM of each dNTP were added and the incubation proceeded for 30 minutes at 37°C. With tRNA^{Lys3} as primer, the same conditions were used except that tRNA and RNA were prehybridized by heating for 2 minutes at 90°C and then slowly cooled. Samples were extracted with phenol-chloroform and

collected by ethanol precipitation. Reaction products were analyzed on 8% polyacrylamide-TBE (90 mM Tris pH 8.3, 90 mM borate, 2 mM EDTA)-7 M urea gels.

5 **RESULTS**

The antiviral activity of the compounds according to example 1 has been tested on various strains.

On HIV-LAI wild type this compound shows the following activities:

10 $IC_{50} = 0,2nM$; $CC_{50} > 10^5 nM$ (S.I. > 33.333).

On an HIV-1 novirapine resistant strain the activities of the compound of example 1 are as follows:

$IC_{50} > 10^4 nM$

$CC_{50} > 10^4 nM$

15 The compound of example 1 has been also tested on various HIV strains and primary cell cultures. The table 1 illustrates the activity of this compound on these strains.

The retrovirucidal effect of the compound according to example 1 has been tested. Table 2 illustrates this effect at various doses of this
20 compound.

The IC_{50} of the compound of example 1 for the inhibition of the reverse transcriptase is 20 nM.

**TABLE 1-Anti HIV-1 activity of the compound of
example 1 on various HIV strains and primary cell cultures**

**TABLE 2: Inhibition of infectivity of the compound of
example 1**

Dosage of compound of example 1	% inhibition of infectivity
10 nM	26%
100 nM	46%
1 µm	83%
10 µm	99%

10 **EXAMPLE 3: Other 3-(amino- or aminoalkyl) pyridinone derivatives and
their retrovirucidal activity against two different HIV-1 strains.**

3.1 Compounds:

Further compounds according to the general formula (I)
15 (compounds n°1-25, 27-108, 110-125, 127-145 and 147-203) as well as four
intermediate compounds used for synthesis (compounds n°26, 109, 126 and
146) have been synthesized and are listed in table 3 below.

The meaning of each of the groups Y, Q and R3 - R6 is defined for
every exemplified pyridinone derivative.

3.2 RETROVIRUCIDAL EFFECT

The retrovirucidal effect of each pyridinone derivative listed in table
5 3 has been assayed according to the teachings of example 2, excepted that
the anti-viral effect has been tested on the two following HIV-1 strains:

- a) HIV-1 strain IIIB (see example 2);
- b) HIV-1 strain 103 N which is a mutant strain bearing a point
10 mutation in the reverse transcriptase gene leading to an enzyme wherein the
initial Lys-103 residue is replaced for a Asn residue.

HIV-1 103N strain exhibits resistance to the reverse transcriptase
inhibitor TIBO R82913 (**BALZARINI J. et al.** 1993, Virology, 192: 246-253).
15 The HIV-1 103 N strain has also been described by **SAHLBERG et**
al., (1998, Antiviral Res., 37 (3) : ASS) and **BALZARINI et al.** (1996,
Antimicrobial Agents and Chemotherapy, 40 (6): 1454-1466).

The results are expressed as pIC_{50} ($pIC_{50} = -\log IC_{50}$), of every of
compound as regards to each of the HIV-1 strains IIIB and 103N. Thus, the
20 pIC_{50} value of compound n°1 as regards to HIV-1 IIIB being 7,6999, the IC_{50}
can be directly deduced as being equal to $10^{-7,6999}M$.

Such high retrovirucidal activities had never been observed
previously when using prior art reverse transcriptase inhibitors.

Consequently, the novel pyridinone derivatives according to the
25 present invention are of a high therapeutical value against HIV related
diseases, particularly against HIV-1 related diseases.

CLAIMS:

1. A compound having the formula (1)

wherein:

- Q represents -NR₁R₂ or -R₀NR₁R₂ wherein:

*R₀ represents C₁₋₆ alkanediyl;

15 * R₁ and R₂ each independently represent C₁₋₆alkyl or C₃₋₆alkenyl; said C₁₋₆alkyl and C₃₋₆alkenyl may be substituted with one, two or three substituents selected from hydroxy, C₁₋₄alkoxy, C₁₋₄alkylthio, aryloxy, arylthio, amino, mono- or di(C₁₋₄alkyl)amino and aryl; or

20 * R₁ and R₂ taken together may form a bivalent radical -R₁-R₂- wherein -R₁-R₂ - represents -(CH₂)₂-O-(CH₂)₂-, -(CH₂)₂-NR₇-(CH₂)₂-, -(CH₂)₂-CH(NHR₇)-(CH₂)₂- or -(CH₂)_n wherein R₇ represents hydrogen or C₁₋₄alkyl and n represents 2, 3, 4, 5 or 6;

25 - R₃ represents aryl or a monocyclic or bicyclic heterocycle selected from pyridinyl, pyrimidinyl, thiazolynyl, furanyl, thienyl, imidazolyl, benzoxazolyl, benzothiazolyl, benzimidazolyl; said monocyclic or bicyclic heterocycle may optionally be substituted with one, two or three substituents each independently selected from hydroxy, C₁₋₄alkyl, C₁₋₄alkoxy, halo, trifluoromethyl, dimethylenoxy or phenyl,

-R₄ and R₅ each independently represent hydrogen, C₁₋₆alkyl,

C₃₋₆alkenyl, C₁₋₄alkoxy, C₁₋₄alkyloxyC₁₋₄alkyl, amino, mono- or di(C₁₋₄alkyl) amino, formyl, C₁₋₄alkylcarbonyl carboxyl, C₁₋₄ alkyloxycarbonyl, or C₁₋₄alkyl aminocarbonyl; wherein C₁₋₆alkyl and C₃₋₆alkenyl may be substituted with one, two or three substituents selected from hydroxy, C₁₋₄alkyloxy, C₁₋₄alkyl thio, aryloxy, arylthio, amino, mono- or di(C₁₋₄alkyl)amino and aryl; or R₄ and R₅ taken together form a bivalent radical of formula -R₄-R₅-wherein -R₄-R₅- represents -CH=CH-CH=CH- or -(CH₂)_t, wherein t represents 3 or 4;

- R₆ represents hydrogen, hydroxy, C₁₋₄alkyloxy, C₁₋₆alkyl, C₃₋₆alkenyl, aryl, C₁₋₄alkyl, amino, mono- or di(C₁₋₄alkyl)amino or alkylaryl;

10 - Y represents O or S;

- X represents a radical of formula:

wherein p represents 1, 2, 3, 4 or 5;

15 q represents 0, 1, 2, 3, 4 or 5;

r represents 0, 1, 2 or 3;

- Z represents NR₈, C(= O), CHOH, CHNR₈R₉; CF₂, O, S or CH=CH; wherein R₈ and R₉ each independently represent hydrogen or C₁₋₄ alkyl;

20 or

a N-oxide, a stereochemically isomeric form or a pharmaceutically acceptable addition salt thereof.

2. A compound according to claim 1 wherein R₁ and R₂ represent each a methyl group.

25 3. A compound according to claim 1 wherein X represents -CH₂- and R₃ represents a phenyl group substituted with two methyl groups.

4. A compound according to claim 1 which is the 3-dimethylamino-4-(3,5-dimethylbenzyl)-5-ethyl-6-methylpyridin-2(1H)-one.

5. A process for the obtention of compounds according to claim 1 wherein X represents $-\text{CH}_2-$, Y represents O, R_3 is an optionally phenyl group substituted and R_6 is hydrogen comprising the following steps:

a) reacting a pyridine, substituted in position 2 with an alkoxy group and in position 3 with an amidoalkyl group, with a $\text{C}_1\text{-C}_6$ alkyllithium, resulting in a lithiated derivate of the said pyridine.

b) transforming said lithiated derivate into an organocopper reagent by reacting it with a complex formed by Cu I and dimethyl sulphide.

c) obtaining a protected pyridinone by reacting the organocopper reagent with optionally substituted benzyl halide.

d) hydrolysing said protected pyridinone and obtaining a deprotected pyridinone .

e) substituting the amine-3 group of said deprotected pyridinone and obtaining the desired pyridinone compound.

6. A process for the obtention of compounds according to claim 1 wherein X represents $-\text{C}(=\text{O})$, Y represents O, R_3 is an optionally substituted phenyl group , and R_6 is hydrogen wherein:

a) reacting a pyridine , substituted in position 2 with an alkoxy group and in position 3 with an amidoalkyl group, with a $\text{C}_1\text{-C}_6$ alkyllithium, resulting in a lithiated derivate of said pyridine.

b) reacting the lithiated derivative with an optionally substituted benzaldehyde, resulting in a substituted pyridinone ,

c) oxidizing said substituted pyridinone , resulting in a protected pyridinone ,

d) deprotecting said protected pyridinone by hydrolysis, resulting in the desired pyridinone compound .

7. Lithiated derivative having the following formula :

5

wherein R_4 and R_5 are as defined in claim 1, and R_{10} and R_{11} are independently C_1 - C_6 alkyl.

8. Pharmaceutical compositions comprising a therapeutically
 10 effective amount of at least a compound according to claim 1 and pharmaceutical carriers.

9. Method of treatment of HIV-related diseases comprising the administration of an effective amount of a compound according to claim 1.

10. Method of treatment of HIV-infection comprising the
 15 administration of an effective amount of a compound according to claim 1.

INTERNATIONAL SEARCH REPORT

International Application No
PCT/EP 99/03023

A. CLASSIFICATION OF SUBJECT MATTER

IPC 6 C07D213/73 A61K31/44 C07F1/02 C07D213/74 C07D213/75
C07D417/06 C07D401/06 C07D405/06 C07D409/06

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 6 C07D A61K C07F

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 97 05113 A (CENTRE NAT RECH SCIENT ;BISAGNI EMILE (FR); DOLLE VALERIE (FR); NG) 13 February 1997 (1997-02-13) cited in the application claims; examples ----	1-10
A	EP 0 462 800 A (MERCK & CO INC) 27 December 1991 (1991-12-27) cited in the application claims -----	1-10

☐ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

INTERNATIONAL SEARCH REPORT

International application No.

PCT/EP 99/ 03023

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: 9 and 10
because they relate to subject matter not required to be searched by this Authority, namely:
Remark: Although claims 9 and 10
are directed to a method of treatment of the human/animal
body, the search has been carried out and based on the alleged
effects of the compound/composition.
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such
an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all
searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment
of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report
covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is
restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.
